For this honors contract, I was tasked with:

Making this program run is quite straightforward. First, you need to run the make command on the gpt_info.py file in order to create an executable which can be run. Next, the executable can be run using './gpt_info' followed by a file input which will be the gpt disk image (in this case the gpt_boot image). The program will then return the appropriate start and end addresses of the partitions.
